Squirrels in LinYuan Senior High School

Squirrels are special animals in Lin Yuan Senior High School. They love to climb trees and play around in the field. Many students are interested in seeing these cute and lively creatures.

Squirrels are like friends. They collect nuts and sometimes forget where they put them. This forgetfulness actually helps trees grow! When squirrels forget about their nuts, those nuts can turn into new trees. So, squirrels help make the trees greener and more beautiful!

Next time you see the squirrels, keep an eye out for them. They might run and jump right in front of you. Just remember not to get too close or feed them, because they're wild animals. Enjoy watching them from a safe distance and appreciate the wonders of nature in school.

Why does the Earth look so blue? It's because of the sea. The sea covers 70% of the Earth. The sea gives food to people, and people can do fun things on the sea. But the human uses may also hurt the eco-system under the sea. One day, people may never get anything good from the sea.

First, fishing hurts the sea a lot. People keep fishing in many parts of the sea. Many sea animals die because of fishing each year. Second, people playing on the beach hurts the sea. People even turn some beaches into hotels. All of the human activities there hurt both the sea and sea animals. Finally, the big ships also hurt the sea. When they sail on the sea, they may throw the garbage or waste into the sea. It pollutes (污染) the sea and kill the sea lives.

Biomimicry

Do you ever think about walking up a glass wall like a gecko without falling off? Well, after studying the sticky secret of a gecko's feet for a long time, scientists are now able to invent something similar to help people climb freely, and even stick and unstick heavy things on walls. This is just one example of biomimicry, copying from nature.

But why are geckos able to climb up walls and to hang upside down? Do they really have sticky feet? No, their feet are not sticky at all. Let's take a closer look at the picture. As you can see, the lines on their toes are covered with thousands of microscopic hairs called setae. It is the structure of these setae which help scientists to understand why geckos can do these amazing things so easily.

So, by copying the world around us, people's lives should become even more convenient and different than ever before!
